**LLN  
ROBOT**

## LLN Robot System API

The LLN Robot System API can be used by developers to extend the LLN Robot System to further meet your organisation's needs.

The LLN Robot System API acts as an interface for external clients to access deployment-specific information from the LLN Robot System.

These APIs are used by the LLN-Robot Zapier application and the aXcelerate and VETtrak integrations.

APIs must be enabled for your deployment before using the Zapier integration.

**Lasting, quality compliance.**
